Grading

- Points Criteria
  - Number of consecutive laps (50%)
  - Fastest lap time (50%)

- Calculation
  - Each team is awarded up to **10 points** per category based on their ranking (e.g., 2nd place out of 10 teams = 9 points).
  - Points = number_of_teams - rank + 1
  - Total score (max 20 points) = consecutive lap points + fastest lap time points

- Bonus Points
  - Bonus points may be given to innovative or interesting algorithms

Warning

You're reading the documentation for a version of ROS 2 that has reached its EOL (end-of-life), and is no longer officially supported. If you want up-to-date information, please have a look at Kilted.

ROS 2 Documentation

The Robot Operating System (ROS) is a set of software libraries and tools for building robot applications. From drivers and state-of-the-art algorithms to powerful developer tools, ROS has the open source tools you need for your next robotics project.

Since ROS was started in 2007, a lot has changed in the robotics and ROS community. The goal of the ROS 2 project is to adapt to these changes, leveraging what is great about ROS 1 and improving what isn't.

This site contains the documentation for ROS 2. If you are looking for ROS 1 documentation, check out the ROS wiki.

If you use ROS 2 in your work, please see Citations to cite ROS 2.

Show us the best you've got.

We are looking forward to seeing your most innovative solutions on the track.
Good luck to all teams!
